QUESTION 1

To promote the 1999 Blair Witch Project, the filmmakers created a website filled with fabricated documents, photographs and other “evidence”, and also circulated a certain kind of poster featuring the film’s three lead actors.

Since internet based viral marketing was still unfamiliar at the time, many people who came across the campaign believed the story behind the film was genuine.

What unusual measure was maintained for several months to support this?

QUESTION 2

In Indian commercial cinema, the standard horror template has always relied on the orchestral stinger: a wall of loud strings, synthesized thuds, or sudden shrieks timed precisely to a visual jump scare. When Karthik Subbaraj and sound designer Vishnu Govind set out to make Pizza (2012) on a shoestring budget, they realized cheap jump scares would feel amateurish. Instead, they devised an unconventional approach to horror sound design, carefully planning how individual sounds could heighten tension and make the scenes feel more realistic and wrote a sound script based on that.

ID what this sound script was.

QUESTION 3

For the 2022 movie X, the director bypassed standard Indian CGI vendors for the Y transformations, by bringing in the renowned visual effects house, Wetā FX . Instead of the anthropomorphic horror _____(4) and rejecting the idea of "Lycan" as seen in Western films, the design team spent months studying the bone topology, gait, and snout architecture of indigenous Indian ____ (4) to ground the mythical Vanaar in Arunachal Pradesh ecology without inflating it into a cartoon monster.

Id X and Y.

(X is a Hindi word and Y is the English translation of X)

QUESTION 4

Director Wes Craven was inspired by 1980s medical reports of Hmong refugees who suffered severe night terrors and mysteriously died in their sleep. This formed the premise for his new film.

When designing the antagonist X, Wes Craven read that red and dark green was the most optically jarring color pairing to the human retina, which inspired X's iconic wardrobe. Finally, wanting a unique signature weapon, he found his answer while watching his pet cat aggressively scratch the living room couch.

ID X

QUESTION 5

The movie, Paranormal activity (2007), made on a budget of 15k USD, grossed 193 million USD at the box office, making it the most profitable horror movie on ROI. Test screenings, had people exiting the cinema, claiming it was too scary, they also mentioned that they couldn't differentiate between the movie being shot like a actual film or a homemade documentary with respect to the cinematography screenplay etc.

ID what way the movie was shot that people couldn't differentiate it from a documentary.

QUESTION 6

The world is riddled with many different superstitious beliefs, but this is a fusion between two of them. The superstition has become quite popular due to its incompleteness. Typically hotels or other buildings combat this superstition in various different ways by removing the floor or that particular room. The other side of this superstition has deep roots in Christianity and is considered quite unlucky as well. These two superstitions combined has become a quite popular franchise and is generally known as quite unlucky.

ID the combined superstition.

QUESTION 7

According to a popular folk etymology, the word X is believed to originate from the Hebrew phrase “Lilith-abi”, meaning “Lilith, begone!”

In Jewish folklore, Lilith was a night demon believed to prey on infants. Mothers would supposedly chant or write protective phrases to ward her off.

Although linguists generally reject this explanation, it remains a popular theory about the origin of X.

Identify X.

QUESTION 8

In Slavic folklore, X is a terrifyingly powerful old sorceress who flies through the air using a giant mortar and pestle and lives deep in the forest inside a hut supported by giant chicken legs. While she frequently threatens to cook and eat lost travelers, she will occasionally grant wise counsel or magical items to those who show respect. This legendary figure's name also famously crosses over into modern action cinema, where the criminal underworld uses it as a feared nickname for the protagonist Y, despite X actually being a female witch rather than a male phantom.

Identify X and Y.

QUESTION 9

QUESTION 10

THE PROVINCE, Mon., Oct. 6, 1958 3

New [redacted] found

JERRY CREW . . . something's afoot

—it's called [redacted]

EUREKA, Calif. (AP)— Jerry Crew, a hard-eyed cantankerous who bulldozes logging roads for a living, came to town this weekend with a plaster cast of a foot-print.

The footprint looks human, but it is 16 inches long, seven inches wide, and the great weight of the creature that made it sank the print two inches into the dirt.

Crew says an ordinary boot will penetrate that dirt only half an inch.

"I'VE SEEN hundreds of those footprints in the past few weeks," said Crew.

He added he made the cast of a print in dirt he had bulldozed Friday in a logging operation in the forests above Weaverville, 50 miles north and a bit east of here in the Klamath River country of north-western California.

Crew said he and his fellow workmen never have seen the creature, but often have had a sense of being watched as they worked in the tall timber.

BIGFOOT, as the Bluff Creek people call the creature, apparently travels only at night.

Crew said he senses danger sind by logging operations, particularly the earth moving that Crew does with his bulldozer in backing out new logging trails.

"Every morning we find his footprints in the fresh earth we've turned the day before," Crew said.

CREW SAID Robert Titmus, a tankerman from Redding, studied the tracks and said they were not made by any known animals.

"And they can't be made by a bear, as there are no claw marks."

"The foot has five stubby toes and the stride averages about 50 inches when he's walking and goes up to 10 feet when he's running."

TWO YEARS AGO reports from this area told of logging camp equipment being wrecked about, including full 50-gallon drums of gasoline scattered by some unknown agency.

QUESTION 14

In Indian village folklore, elders strictly warn against sleeping beneath the sprawling canopy of a Banyan or Peepal tree after sunset. The myth claims that the cursed demons Brahmarakshas residing in the branches will drop down and sit upon your chest leaving you paralyzed and gasping for breath. This is actually based on the fact that sleeping under such massive trees at night can cause localized hypoxia.

ID the reason/phenomenon that causes this.

QUESTION 15

A horror concept, made in the internet, began with a very unsettling image, a very ordinary looking but endless room, that felt strangely familiar like a feeling of deja vu, like you have seen this before but cannot remember when. It initially started as a niche idea, but later on developed its own story, characters etc, eventually making its way to mainstream movies.

Despite having a weird origin, the film became of the most popular films of the year, crossing 400 million dollars at the box office

QUESTION 16

In the 16th and 17th centuries, European doctors frequently prescribed a dark, powdery medicine called Mumia to cure everything from headaches to stomach ulcers. The medicine was highly expensive because it was imported from Egypt. However, this was entirely based on a massive linguistic mistranslation. The Arabic word mumiya actually referred to the sticky, black medicinal asphalt/bitumen found in nature. Because European traders misunderstood the translation, they spent two centuries grinding up and eating _____ (7).

QUESTION 18

In the 18th and 19th centuries, the medical community's ability to pronounce someone dead was so poor that a massive psychological phenomenon called "Taphophobia" swept across Europe. To combat this fear, inventors created expensive "safety coffins." These graves featured a string tied to the corpse's finger, which ran up through the soil and was attached to X above ground. If the person woke up, they could pull the string to alert the graveyard's night watchman. The use of X in this morbid context gave birth to the English idiom, 'saved by the X'.

QUESTION 19

In the late 1990s, early 3D consoles struggled heavily with 'draw distance'. If a player moved through a large open environment, distant buildings and enemies would weirdly pop out of thin air as the hardware struggled to render them. In 1999, a team at Konami was building a horror game and needed a way to mask this technical limitation. Their solution was to severely restrict the player's visibility by adding X to the entire outdoor environment. This also created an intense feeling of claustrophobia and paranoia, becoming the defining aesthetic of the Silent Hill franchise.
